SOLAR SYSTEM MODEL

As a way of demonstrating your new learning and understanding, you will create a model of the layout of our solar system. You may choose the format of your model, but will need to keep mind the following key components:

- Correct order of the sun and planets
- Relative size of each, compared to one another
- Representation of planets' key features (such as rings, or the Great Red Spot)
- Inclusion of the Asteroid Belt in its correct location
- (Labeling all the objects may be a nice detail as well - Spelling!)

Some possible formats you may choose for your model are:

- Poster/butcher paper banner
- Shadow box with hanging planets
- Mobile (on a hanger)
- Have a different idea? Make your proposal!

Accuracy and attention to detail will be important, but you will only have a couple days to complete your model. We are most excited to see how much you have learned about our solar system, so use your knowledge and your creativity to "wow" us!
